Why Add Bugs When You Can Turn Your Septic Tank Into an ATU By Installing the NIBBLER[®] CBP[™]?

The NIBBLER[®] CBP[™] product is the most flexible onsite wastewater treatment system in the market today. Each CBP unit can treat a maximum organic load of .81 ppd BOD₅. Systems are sized based upon the needs and treatment levels required at each individual site. CBP systems can consist of one, two or three units depending upon the facility and the treatment requirements. A mini-mart, gas station, etc. can now expand business without fear of ruining their disposal system by simply adding a CBP unit(s) to the existing system.

The patented back-flush technology allows the maintenance personnel the ability to maintain the system quickly and easily. Ease of maintenance assures the owners that the performance and sustainability of their system will continue while costs are kept at a minimum.
